Fixed & Removable Security

Bollards & Posts

For use in general public areas and situations where traffic calming is required, utilizing an engineering grade of polyurethane, cast around a steel core these bollards provide the perfect solution too. Their high tensile strength and vandal resistance make Rhino Steel Bollards suitable for the most demanding of applications. Bollards can be adapted to be removed if required, to allow vehicle access. Galvanised steel chain hook and eyes can be fitted to enable incorporation into barrier systems. .

The standard paint finish is a two pack polyurethane gloss coating, available in any RAL or BS number, which gives excellent weathering characteristics to provide a virtually maintenance free product.

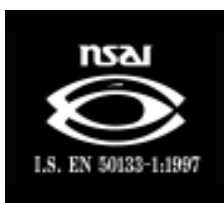

Fixed & Removable Bollards - Styles

For a permanent pattern of traffic and or pedestrian control, static bollards are the ideal solution. They can be installed to give firm vehicular restraint while preserving an open and inviting environment. They are easy to install retrospectively as they can be either ground or surface mounted if required. Static or fixed bollards are ideal for pedestrian schemes, parks, and other situations where an effective but aesthetically pleasing traffic restriction is required.

They are widely regarded as unobtrusive and can even be elegant, yet are a genuine deterrent to the potential miscreant. There are such a wide range of designs available.

Bespoke Fixed & Removable Bollards

As well as a vast range of designs and styles to choose from we are also able to provide custom built bollards to your specification, contact us for further details of this service.

Brought to you by Gate Automation Systems (Irl).

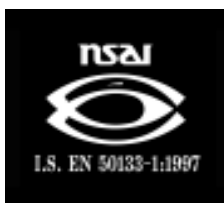

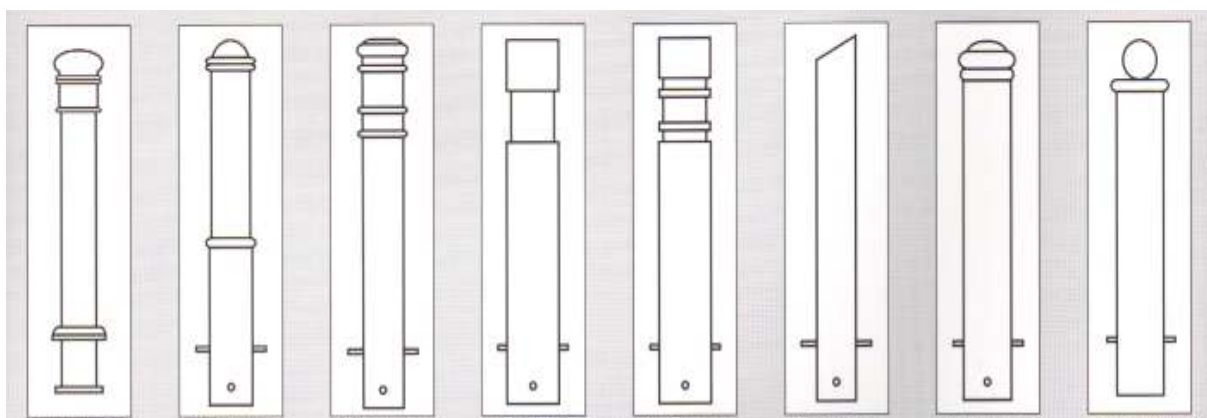

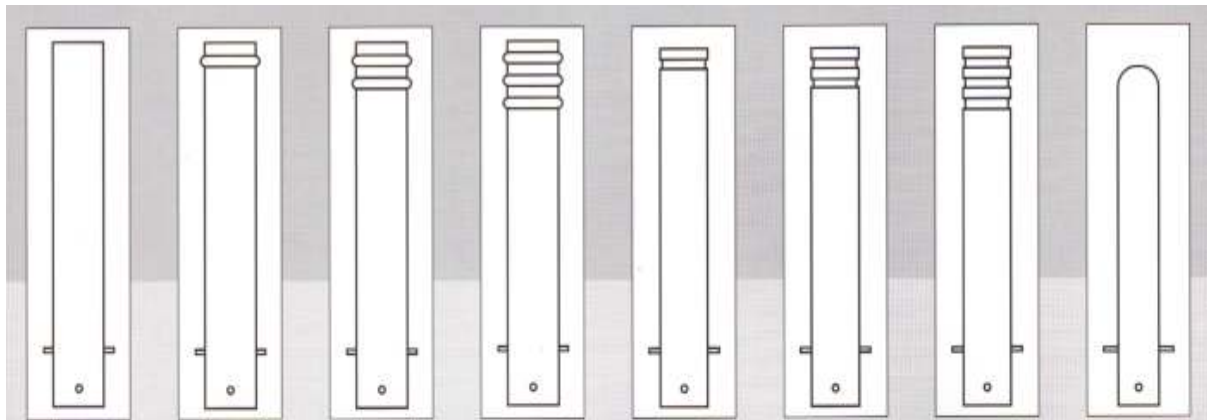

Fixed & Removable Bollards - Specifications

As mentioned the fixed or static bollards can be either ground or surface mounted and are available with optional chain loops for temporarily or permanent sectioning of areas. This makes them highly flexible in most situations where there may be a future need for this type of segregation.
