PRODUCT DATASHEET

GSM MOBILE ENTRY UNIT

GSM Mobile Entry Unit

The GSM Mobile Entry Unit from Gate Automation Systems (Irl) is the ultimate in secure access control for your automatic gate system. This system gives the homeowner a more secure and efficient method of access to their property than either a keypad (code may be compromised), or an intercom unit (if there is no answer the caller will know there is no one home).

Features

- This system allows the remote operation of automated gates from your existing mobile phone.
- No need to provide a remote control for different users.
- Replaces keypads and intercom units.
- No more problems with range as the system works from anywhere in the world.
- The system stores up to 500 authorized mobile phone numbers.
- Numbers can be easily added and easily taken off.
- The user simply calls a dedicated phone number in the unit which reads your number, opens the gate and hangs up.
- No call costs are incurred – the device rejects the call from the authorized number.
- The ultimate universal remote control system.
